

How to use this report

Underlying data is stored in a Google Sheet
[AVP Page URL](#)

The underlying query that produced this data contains strict filtering that only considers callers (from callrail) that have a call date on the same date as an appointment create date.

It then looks at the first instance of a caller's call date (min) and observes all transactions after that appointment create date. Another way to describe this is conditional lifetime value.

Said another way, this query will exclude many people who may have been patients based on a matched patient record's phone number to a caller id that were browsing our website for any particular reason but because we did not verify the website was being used directly for the purposes of an appointment (at any point in a callers history of calls) we do not consider them in this methodology

This data is not a direct representation of revenue per page, it's a directional estimate to represent a proportion of revenue per page using the law of large numbers.

Finally, the page url revenue formula is modeled after the Google Analytics "[position based](#)" attribution. That is, 40% of the revenue will be assigned to the first and last pages in the entire log of page views for a caller.

Rounding was set to the thousands place, so there will be some rounding errors

(414.892*2) + (69.49441*3) = 1038.26723
829.784 + 208.48323 = 1038.26723

(.4*2)+(.067*3) = 100.00100%
